

Shaikh Aman

Full Stack Developer (React | Node.js) | Hyderabad, India

+91 90593 46608 | amanshaikh0025@gmail.com | shaikhaman.in

github.com/ShaiKhAman01 | linkedin.com/in/shaikhaman01

Summary

Full-stack developer (B.Tech IT, 2026) with a 6-month production internship on a live ride-hailing platform (Google Play and App Store), building the REST APIs and real-time systems behind its rider, driver, and admin apps. Ships end to end: React/Next.js frontends, Node.js and FastAPI backends, PostgreSQL, and CI/CD. Three self-built products live at shaikhaman.in, including an AI analytics platform and an edge-deployed arcade.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL

Frontend: React.js, Next.js, Redux Toolkit, Zustand, Tailwind CSS

Backend & APIs: Node.js, Express.js, FastAPI, Hono, REST APIs, WebSockets, JWT Authentication, role-based access control

Databases & Caching: PostgreSQL, MySQL, SQLite, Redis, Firebase Firestore, Prisma ORM, Drizzle ORM, database design

Cloud & DevOps: Docker, Docker Compose, GitHub Actions (CI/CD), Cloudflare Workers, Vercel, Git

AI & Data: LLM integration (OpenAI, Gemini, Llama 3), text-to-SQL generation, data validation, caching (TTL, LRU)

Tools & Practices: Postman (API testing & debugging), Agile stand-ups, code reviews, SDLC, technical documentation

Experience

Product Developer Intern - UrbanLoop

Mar 2025 - Aug 2025

Ride-hailing platform; rider and driver apps live on Google Play Store and Apple App Store

- Primary backend developer on a 5-person startup team, working across the SDLC: requirement analysis in stand-ups, development, API testing and debugging with Postman, and PR-based code reviews with a senior backend engineer.
- Migrated the legacy Python/Flask backend to Node.js, Express.js, PostgreSQL, and Prisma ORM; the new system now runs in production.
- Built the core REST APIs powering the rider app, driver app, and internal admin panel, secured with JWT authentication and role-based access control.
- Implemented WebSocket-based real-time ride tracking, a Redis-backed OTP login flow, and automated workflows: referral and rewards tracking, WhatsApp API notifications, and cron-scheduled jobs.

Projects

IntelliQuery - AI Data Analytics Platform / *Next.js, FastAPI, PostgreSQL, OpenAI/Gemini*

Live | GitHub

- Built a platform that turns plain-English questions into validated SQL across five database engines (PostgreSQL, MySQL, SQL Server, SQLite, CockroachDB), returning results, charts, and AI summaries grounded in server-computed statistics.
- Designed a template-first SQL pipeline: deterministic templates answer common queries at zero LLM cost, with a schema-grounded OpenAI-to-Gemini fallback, one-shot query repair, and TTL+LRU caching with schema-aware invalidation.
- Enforced defense-in-depth data safety: SELECT-only validation, read-only transactions, query timeouts, and row caps.

Inscribe - Edge-Native Blogging Platform / *React, Hono, Cloudflare Workers, PostgreSQL, Prisma*

Live | GitHub

- Developed a Medium-style publishing platform with tags, likes, comments, and one-click AI post summaries (Cloudflare Workers AI, Llama 3); ran Prisma on the edge via Accelerate HTTP pooling, published a shared Zod validation package to npm, and sanitized user content with DOMPurify.

PixelPlayground - Edge-Backed Browser Arcade / *Hono, Cloudflare Workers, D1 (SQLite), Drizzle*

Live | GitHub

- Built six offline-capable browser games on a serverless edge backend with guest-first auth: guest accounts upgrade to full credentials without losing data; replaced bcrypt with PBKDF2 (WebCrypto) to fit Workers CPU limits.
- Made scoring server-authoritative with Zod-validated submissions and per-game plausibility rules for cheat-resistant leaderboards; per-game code splitting cut bundles to 24-44 KB.

Education

Bachelor of Technology in Information Technology (IT)

2022 - 2026

MLR Institute of Technology, Hyderabad

CGPA: 7.78 / 10

Coursework: Data Structures & Algorithms, Database Management Systems, OOP, Operating Systems, Computer Networks

Achievements & Certifications

- Won 1st place in the MLRIT Innovation Challenge for building a web application.
- Conducted a two-day Flutter & Firebase workshop, training 100+ peers.
