Summary

B.Tech IT graduate (2026) and backend-focused developer with 6 months of production experience at a ride-hailing startup (Node.js, PostgreSQL). Builds full-stack and LLM-powered applications.

Technical Skills

Languages: Python, TypeScript, JavaScript, SQL
Fundamentals: OOP, Data Structures, REST APIs, Git & GitHub, Linux command line
Frontend: React.js, Next.js, Tailwind CSS
Backend: Node.js, Express.js, FastAPI, Hono, WebSockets, JWT Authentication
Databases: PostgreSQL, MySQL, Redis, Prisma ORM
Cloud: AWS (EC2, S3), Cloudflare Workers, Vercel
AI: LLM APIs (OpenAI, Gemini), prompt engineering, Claude Code, MCP

Professional Experience

Product Developer Intern - UrbanLoop Mar 2025 - Aug 2025
Ride-hailing platform with rider and driver apps live on Google Play and the App Store

- Designed the PostgreSQL schema and Prisma data layer for 3 user roles (riders, drivers, admins), then replaced a small legacy Flask service with a Node.js and Express backend that went into production.
- Built the REST API across 12 domain modules (rider, driver, ride, fare, payouts, rewards, admin), guarded by role-based auth middleware and request-schema validation.
- Implemented real-time ride tracking across 4 ride states, a Redis-backed OTP flow over 2 channels (SMS and voice), and 3 nightly cron jobs for backups, account cleanup, and subscription expiry.
- Integrated Cashfree for weekly and monthly driver subscriptions and wallet payouts, plus S3-backed verification of 6 onboarding documents per driver.
- Owned the internal admin dashboard end to end, covering 5 operations workflows: driver and rider management, fares, rewards, document review, and earnings reporting.

Projects

IntelliQuery - AI Data Analytics Platform / *Next.js, FastAPI, PostgreSQL, OpenAI/Gemini* Live | GitHub

- Developed a platform that converts plain-English questions into SQL across 5 database engines and returns results, charts, and AI-generated summaries.
- Engineered a rule-based SQL generator that handles common questions (counts, totals, averages, trends) without an LLM, falling back to OpenAI or Gemini only for complex ones.
- Protected connected databases by running only read-only SELECT queries, with a 15-second timeout and a 100-row result limit.

Inscribe - Edge-Native Blogging Platform / *React, Hono, Cloudflare Workers, PostgreSQL, Prisma* Live | GitHub

- Created a Medium-style blogging platform with 14 REST endpoints covering auth, posts, comments, likes, and one-click AI summaries, running on Cloudflare Workers.
- Published an npm package of 5 shared Zod validation schemas, used by both the frontend and the backend.

PixelPlayground - Browser Arcade / *Hono, Cloudflare Workers, D1 (SQLite), Drizzle* Live | GitHub

- Shipped 6 offline-capable browser games with leaderboards, streaks, and guest accounts that upgrade to full accounts without losing progress.
- Validated all scores on the server to prevent cheating, and split code per game to keep each bundle under 45 KB.

Education

Bachelor of Technology in Information Technology (IT) 2022 - 2026
MLR Institute of Technology, Hyderabad CGPA: 7.78 / 10

Achievements & Certifications

- Won 1st place in the MLRIT Innovation Challenge for building a web application.
- Led a 2-day Flutter & Firebase workshop as the trainer, teaching 100+ peers.
